

Paper Title

Anonymous Author(s)

ABSTRACT

The two-page proposal should describe the problem, its relationship to the course, the proposed work, the responsibilities of each team member, the resources required, and how the outcome will be evaluated. Your proposal should convince us that the project is relevant, technically meaningful, feasible within one semester, and supported by a concrete evaluation plan.

Engineering-track proposals should identify the intended users and their current workflow, survey existing tools, explain the missing capability, define the proposed interface and implementation, and describe how you will demonstrate correctness and usefulness. The proposal must also explain how the project can be developed and evaluated without specialized hardware or a multi-GPU cluster.

This template illustrates the required formatting. See the call for papers for submission requirements, scope, review criteria, anonymity rules, and policies.

1 FIRST SECTION

Replace this text with the body of your paper. The section structure shown here is only illustrative and is not required. Use whatever organization best fits your submission.

This sentence shows an example citation [1]. Each reference must list all authors of the cited work.

2 SECOND SECTION

Replace this text with the body of your paper.

3 THIRD SECTION

Replace this text with the body of your paper.
